

## Grand Reference Cables

### Loudspeaker Cable

The Grand Reference loudspeaker cable is the best loudspeaker cable in our Reference program and is based on large pure silver-gold conductors. These pure silver-gold conductors are made of very pure silver with a small injection of 24k gold. The quality of this silver-gold metallurgy is unchallenged. Also do silver-gold conductors improve over time, where copper conductors degrade over time.

The conductors are treated with the Kharma Advanced Core Treatment 1.0 (ACT-1.0) and the insulator is carefully picked, so the pure silver-gold conductors and the insulator make a perfect match. Besides a massive vibration isolating tubing reduces structure born and air-born vibrations to a minimum before reaching the pure silver-gold conductors. This Loudspeaker cable is terminated with special high quality pure silver-gold Kharma spades, realizing a high-quality one-material conductor-termination-circuit.

All this leads to a clear and very powerful revealing cable, with lots of definition, superb resolution, enormous dynamics, sweetness, air and an open and wide stereo image.

Type:	KLC-GR-1b
Standard length:	2 m
Minimum length:	1.5 m
Options:	Also available as Bi-wire

### Interconnect Cable

The Grand Reference Interconnect cable is based on a large number of high quality pure silver-gold conductors which are positioned in a special star-like concentric configuration and air insulated.

The conductors are placed behind a very effective shielding to protect the signal from unwanted external electromagnetic interference. Besides a vibration isolating tubing reduces the vibrations to a minimum before reaching the pure silver-gold conductors. This Interconnect cable is terminated with high-quality RCA plugs with a solid silver-gold center-pin, which make a perfect match with the pure silver-gold conductors, realizing a high-quality one-material conductor-termination-circuit. The Interconnect cable is available in both the analog and the digital version, with several plugs.

All this leads to a clear and very revealing cable, with superb resolution, enormous dynamics, sweetness, air and an open and wide stereo image.

Type:	KIC-GR-1b / KDC-GR-1b
Standard length:	1 m
Minimum length:	1 m
Options:	Analog with RCA / XLR plug Digital with RCA / XLR / BNC plug

## Power Cable

The Grand Reference Power cable is the best power cable in our Reference program and is based on four very heavy gauge silvered OFC conductors placed behind very effective shielding, protecting them from electromagnetic interference.

The conductors are positioned in a unique crossed quad formation, which leads to effective passive filtering of unwanted high frequency electrical interference. This makes your installation reveal a very clean sound and a clear picture. Moreover a large vibration isolating tubing reduces the vibrations to a minimum before reaching the conductors. Besides this Power cable is terminated with very high quality 24k gold plated plugs of carefully selected materials for superior sound quality.

All this leads to a very clear and revealing cable, which gives your installation a sense of quietness and ease, but yet with enormous dynamics, extreme power, definition, sweetness, air and an open and wide stereo image.

Type:	KPC-GR-1b
Standard length:	2 m
Minimum length:	1.5 m
Options:	IEC Connector / IEC HC Connector

## Power Block

The Grand Reference Power block is the best power block in our Reference program based on heavy silvered copper conductors. These conductors are treated with a vibration reducing compound. This compound reduces structure born and air-born-vibrations to a minimum before reaching the conductors.

The Power block has a direct connection to the designated Kharma Grand Reference Power cable (KPC-GR-1b). There is no active filtering, just the best way to present power to the other power cables. The Grand Reference Power block is placed on a Kharma SDSS stand for decoupling from the floor.

All this leads to a very clear and revealing power block, which gives your installation a sense of quietness and ease, but yet with enormous dynamics, extreme power, definition, sweetness, air and an open and wide stereo image. A Kharma power block can be one of your most important components upgrades.

Type:	KPB-GR-1a
Standard length:	2 m
Minimum length:	1.5 m
Options:	US Connector / Shuko Connector
