

Supreme Reference Cables

Loudspeaker Cable

The Supreme Reference Loudspeaker cable is based on pure silver-gold conductors of substantial gauge. These pure silver-gold conductors are made of very pure silver with a small injection of 24k gold. The quality of this silver-gold metallurgy is unchallenged.

This Loudspeaker cable is terminated with special high quality pure silver-gold Kharma spades, realizing a high-quality one-material conductor-termination-circuit. A large vibration isolating tubing is surrounding the conductors. This tubing reduces vibrations to a minimum before reaching the pure silver-gold conductors and is fitted with high quality black aluminum casings.

All this leads to a clear and very revealing cable, with lots of definition, resolution, dynamics, sweetness, air and an open and wide stereo image. The Kharma Supreme Reference Loudspeaker Cable is handcrafted with expertise and dedication.

Type:	KLC-SR-1a
Standard length:	2 m
Minimum length:	2 m

Interconnect Cable

The Supreme Reference Interconnect cable is based on high quality pure silver-gold conductors which are positioned in a special star-like concentric configuration and air insulated. To protect the signal from unwanted external electromagnetic interference, the conductors are placed behind a very effective shielding.

The Interconnect cable is available in an analog or digital version, which for example can be terminated with high-quality RCA plugs with a solid silver-gold center-pin. As a result a perfect match with the pure silver-gold conductors, realizing a high-quality one-material conductor-termination-circuit.

All this leads to a clear and very revealing cable, with impressive resolution, great dynamics, sweetness, air and an open and wide stereo image. No excess decoration and unnecessary complexity make this cable true value for your money and without a doubt the best interconnect cable in its price-league.

Type:	KIC-SR-1b / KDC-SR-1b
Standard length:	1 m
Minimum length:	1 m
Options:	Analog with RCA / XLR plugs Digital with RCA / XLR / BNC

Power Cable

The Supreme Reference Cables is based on four heavy gauge silvered OFC conductors placed behind very effective shielding, protecting them from electromagnetic interference. The conductors are positioned in a unique crossed quad formation, which leads to effective passive filtering of unwanted high frequency electrical interference. This makes your installation reveal a very clean sound and a clear picture. A large vibration isolating tubing reduces vibrations to a minimum before reaching the conductors. This power cable is terminated with high quality plugs of carefully selected materials for superior sound quality.

All this leads to a very clear and revealing cable, which gives your installation a sense of quietness and ease, but yet with lots of dynamics, power, definition, sweetness, air and an open and wide stereo image.

Type:	KPC-SR-1b
Standard length:	2 m
Minimum length:	2 m
Options:	IEC Connector / IEC HC Connector

Power Block

The Supreme Reference Power block is based on heavy silvered copper conductors. The conductors are treated with a vibration reducing compound. This compound reduces structure born and air-born-vibrations to a minimum before reaching the conductors. This Power block has a direct connection to the designated Kharma Supreme Reference Power cable (KPC-SR-1b). There is no active filtering, because this is just the best way to present power to the other power cables.

All this leads to a very clear and revealing power block, which gives your installation a sense of quietness and ease, but yet with lots of dynamics, power, definition, sweetness, air and an open and wide stereo image. A Kharma power block can be one of your most important components upgrades and so this Power block is handcrafted with expertise and dedication.

Type:	KPB-SR-1a
Standard length:	2 m
Minimum length:	1.5 m
Options:	US Connector / Shuko Connector
